PORCELANOSA

PORCELANOSA

## OUR PREMISES

At Porcelanosa we base the success of our products on three premises; unconditional quality, a commercial network of our own and an infrastructure to embrace all these factors. We think the infrastructure is key to the success of our products. We want our installations to have a perfect combination of functionality, versatility and distinction.

## SHOWROOMS

With more than 400 showrooms spread worldwide; from Madrid to New York, through cities like London, Milan or Paris, Porcelanosa Grupo thus assures its presence in the five continents to show the steady improvement in innovation and design of all its products.

## ENVIROMENTAL COMMITMENT

The environmental commitment Porcelanosa has shown toward its immediate surroundings and the environment as a whole has characterized the company since its origins is clearly reflected by ECOTECH®.

ECOTECH® is a collection of environmental ideas and initiatives, including substantial yearly investment into systems for recycling water, waste re-use, environmental protection and energy saving and it is a ISO 14001 certified environmental management system.

## CORPORATE SOCIAL RESPONSIBILITY

At Porcelanosa, we only consume electricity from guaranteed renewable sources.

- We generate 30% of the energy we use at Porcelanosa ourselves.
- Over 90% of the lighting in our premises is high-performance, low-consumption led lighting.
- Half of our indoor surface area receives natural light, which reduces electricity consumption.
- Our in-house rolling stock is comprised of electric vehicles.
- As part of our commitment to the ecosystem we live in, in 2021 we plan to restore a forest area with 17,000 trees.
- More than 95% of the waste generated by Porcelanosa is reused, recycled or repurposed.
- We have reduced water consumption in our tile manufacturing processes by 20%.
- We minimize water and gas use by dry pressing our ceramics.
- 100% of the wastewater is purified and reused, producing 0 litres of discharge.
- All collections manufactured by Porcelanosa contain between 10 and 20% recycled material, with special mention of the Ecologic series, which contains 95% recycled materials.
- We calculate and reduce our carbon footprint every year, ensuring our commitment as a circular economy.
- Our products contribute to obtaining credits or points in LEED, BREAM and VERDE certifications.

## Rectified Porcellanato Tiles

CERAMIC PARQUETS HAVE REVOLUTIONIZED THE WORLD OF FLOORING, UNITING THE WARM ELEGANCE OF NATURAL WOOD WITH THE TECHNICAL BENEFITS OF CERAMIC TILES. PAR-KER IS PORCELAIN FLOORING ABLE TO WITHSTAND THE WEAR AND TEAR GENERATED BY CONSTANT USE. IT IS EVEN SUITABLE FOR AREAS SUBJECT TO MEDIUM TRAFFIC, SUCH AS LEISURE FACILITIES, CATERING BUSINESSES, OR CERTAIN AREAS OF SHOPPING CENTRES WHERE NATURAL WOOD WOULD NOT PERFORM ADEQUATELY.

# ARIZONA

Technical drawing of a STON-KER V3 profile. It shows three cross-sectional views: a top view, a side view, and a front view. The front view is labeled 'V3'. To the right of the views is a bracket containing 'R9'. Further right is a label 'SRV class 1' with a small icon of a foot stepping on a surface. To the right of this is a small icon of a foot stepping on a surface. The brand name 'STON-KER®' is printed in a bold, sans-serif font.

# CERTIFICATES

## ECOLABEL

The European Ecolabel is a voluntary scheme for environmental certification, designed to distinguish products and services that are environmentally-friendly. Created in 1992, the products and services awarded the Ecolabel carry the flower logo, allowing consumers – including public and private purchasers – to identify them easily. While the logo may be simple, the environmental criteria behind it are tough, and only the very best products, which are kindest to the environment, are entitled to carry the EU Ecolabel. The Stonker Ecologic series carries this label.

## CARBON FOOTPRINT

A Carbon Footprint study has also been carried out for Stonker Ecologic, with subsequent certification by AENOR according to the British PAS 2050 ‘Cradle to Gate’ assessment. The aims of the study are to determine the ‘quantified’ contribution of the manufacturing and distribution process for this product to climate change, to identify possible ways of reducing greenhouse gas emissions, and to extend the information to include the impact of emissions in decisions made regarding suppliers, materials, product design, manufacturing processes, etc.

# LIGHT INFORMATION

Considering the existing light in a room is essential to achieve continuity between the tone of the wall and the floor. This is why white light is recommended, which is the same one that Porcelanosa applies in its levelling process.

COLD LIGHT

NEUTRAL LIGHT

WARM LIGHT

CERTIFICATES

ISO 14021

In line with its commitment to the environment, PORCELANOSA has developed ECOLOGIC series, a collection of tiles manufactured with recycled material recovered from the production process.

The basic material used to manufactured STON-KER ® anf PAR-KER ® ECOLOGIC comes from pre-consumer recycled material (raw clay and powder) that is reincorporated into the production process. The production of STON-KER ® and PAR-KER ® ECOLOGIC results in a notable reduction in raw material consumption (in addition to minimising the environmental impact associated to the extraction and tranSPORT of the shame), and significant energy saving in the production of ceramic tiles.

The content of the recycled material, over 95%, is quantified in the environmental product declaration, certified by ISO 14021, and which certifies, through a trusted external organisation, the ecological nature of the series.

The use of STON-KER ® and PAR-KER ® ECOLOGIC in the covering of buildings, gives additional value (extra points) in the assessment by the market's leading certification bodies (LEED, BREEAM, VERDE, ETC.)

CERTIFICATES

ISO 50001: 2011

PORCELANOSA has implemented an energy management system in accordance with the ISO 50001 standard, designed to act as a tool for the reduction of energy consumption and consequently the emission of greenhouse gases. By improving energy performance levels, the aim is to promote maximum efficiency in all our processes, thereby further endorsing the clear environmental commitment maintained by the company throughout its history.

CERTIFICATES

ISO 9001: 2015

With a philosophy based on-going improvements and customer satisfaction, PORCELANOSA guarantees the aesthetic and technical characteristics of its products by applying a quality control system certified by ISO 9001 to the design, production, distribution and commercialisation of its wall and floor tiles and trims.

CERTIFICATES

ISO 14001: 2015

With a framework of increasingly strict legislative controls, PORCELANOSA has demonstrated its firm commitment to the environment with the introduction of a management system certified to ISO 14001, thus reflecting its respect and concern for the environment.

# CERTIFICATES

EPD

The system developed for environmental declarations for buiding products (EPD) has been created in order to help the construction sector adpat to a new, more coherent and more sustainable model, motivated by growing social interest in reducing environmental effects in the field of construction, one of the sectors that causes the greatest impact. This is a pioneering initiative in Spain, aimed at achieving the same level as some of the leading European legislation. The goal is to achieve environmental improvements in the construction sector, based on a thorough understanding of the impacts caused by each of its components, as well as the environmental transparency of the sector.

# INSTALLATION INSTRUCTIONS

TECHNICAL TREAD

- INSTALLATION:
- Make sure that the substrate is flat and ready for laying the treads (with no dust, oil or grase etc).
  - Start to lay the treads from the bottom of the staircase (moving upwards). (1)
  - Use suitable tile-laying tools and the right adhesive for the tiles and substrate.
  - Handle the tiles with care.
  - The stair riser of the first step should rest on the bottom floor tile. Subsequent risers should rest on the stair tread below each one. (2)
  - Lay all the stair treads before proceeding to lay the risers. (1)
  - Level the vertical substrate for each stair riser so that, once the cement has set and the stair riser has been laid using the thin bed method, it reaches the outer edge of the stair tread above it or leaves the desired joint between them. According to the Spanish Building Code, when the stairs are used for upward evacuation or mainly used by children, the elderly or the disabled, stair nosings or overhanging treads are forbidden. (The tread and riser must be edge to edge). (3)
  - Cut the stair riser to the right size to comply with the initial plans for the stairs. (The Spanish Building Code establishes that stairs for general use should have steps with a height of over 13 cm and less than 18,5 cm and that the treads should be bigger than 28 cm). (4)
  - Bond the tiles solidly, making sure that there are no voids, to prevent them from breaking or coming loose. (2)
  - Grout the tiles using materials recommended by Porcelanosa.
  - Protect the tiled surfaces until all on-site work has been completed in order to prevent them from being damaged during subse quent tasks.

# INSTALLATION INSTRUCTIONS

## CERAMIC TILES

1. Installation of ceramic tiles should be carried out by skilled personnel, with demonstrable experience and appropriate tools and equipment, (I.e. toothed trowels, tile spacers, rubber mallets and suction cups for installation, and rubber trowels, sponges and containers for grouting). Check the information contained on the packaging beforehand, and meticulously follow the manufacturer’s recommendations.

2. Check that the substrate to be covered is stable and the base is suitable for installing ceramic tiles: rough texture, not friable completely flat and level. We recommend that all damp areas are waterproofed.

3. Surfaces to be tiled must be completely free of dust or any other substance which could impair tile adhesion. For specific installations (radiant heating systems, façades with mechanical anchors, ceramics on roofs/ceilings or particular design constraints) request additional information specifically for each application.

4. The workplace must be adequately lit to detect possible installation defects easily, especially lippage between tiles. Electric site lighting is recommended, to provide brighter than normal light.

5. Choose the type of adhesive depending on the conditions and tiles used. The choice of tile and adhesive are critical to the subsequent performance of the entire work. Factors to take into account are: the type of ceramic material, tile format, substrate and end use (any traffic it will be subjected to, safety requirements in respect of falls ...). PORCELANOSA catalogues contain recommendations in respect of use and slip resistance, as well as the butech adhesive recommended for each design.

6. The only fixing system recommended is installation on a thin layer using a toothed trowel. A double bonding technique (with adhesive applied to both the substrate and the back of the ceramic tile) is recommended for tiles with a format larger than 1,000 cm2. It is essential to remove any traces of bonding material that may remain on the surface of the tile prior to setting, ensuring that the joint is left clean to make grouting easier. Do not use metal tools or blunt elements in cleaning operations that could damage the surface of the tiles.

7. Great care should be taken when handling to avoid scratching, breaking or chipping the tiles, especially rectified tiles. Prior to installation, check that the tiles are free from defects.

8. Grout joints should be at least 1,5mm for interior flooring and 5mm for exterior paving. For installations with offset joints, stagger the tiles at the 3/4 point. Self-levelling tile spacers are recommended \*.

\* Before using the system of anti-leveling crossings, perform a preliminary test with the type of wall tiles or floor tiles to be placed and check that during the breakage process of the separator, the tile is not damaged especially in embossed or rectified tiles without beveling. Consult the national standards of placement and respect the minimum joint width indicated for the type of tile and installation to be carried out.

9. Follow manufacturer's recommendations in respect of the preparation and use of adhesives. Do not apply adhesive at a thickness greater than indicated on the label, check the wetting capacity of the adhesive and press the ceramic tile into the bonding material with a side to side movement. Distribute the adhesive evenly under the tile. Different thicknesses may produce lippage defects caused by differential shrinkage of the bonding material. When positioning adjacent to previously installed ceramic tiles, estimate possible shrinkage and compensate for this.

10. Edge joints occurring at corners, changes of paving level and changes of material should be covered with tile trim or a tile itself and sealed with flexible sealant. Minimum joint width: 8 mm.

11. Take account of structural joints. Movement joints should be positioned as directed by the project designer. In general, do not design areas greater than 50-70 m2 for interiors and half that for exteriors. Minimum joint width: 8 mm.

12. Both during installation and at the end of the day, check the quality of the work carried out before the bonding material sets. Correct any defects using suction cups and rubber mallets.

13. Prior to grouting, check that the bonding material has hardened. Remove the tile spacers, clean the joints along their length, width and depth, and check the joint is not damp.

14. Joints should be grouted when the tiles are completely fixed to the substrate. In respect of paving, follow the recommendations of the adhesive manufacturer to ensure sufficient time is allowed before the floor is walked on or subjected to load. In this way movement and/or breakages are avoided.

15. Follow the manufacturer's recommendations in respect of the preparation and use of grouting materials. Ensure that the material and tools chosen do not damage the tile surface. The grout should be applied using a rubber trowel. PORCELANOSA catalogues contain details of the butech materials recommended for each design.

16. Wait for the grout to start to dry, then clean with a sponge dampened in clean water. Do not allow the grout to harden on the tile, especially on textured tiles. Do not soak the joint with excess water.

17. Protect the paving against premature loading, other construction work and adverse weather. We recommend covering the paving with sheets or boards to avoid a build-up of dirt and to protect from scratches, abrasion and impact.

18. For cleaning, use products compatible with the chemical resistance of the tiles. Do not use strong detergents containing abrasives or cleaning agents containing hydrofluoric acid (HF). This acid attacks the glazing and will cause irreparable damage to the tiles.

# CLEANING RECOMENDATIONS FOR CERAMIC TILES

## 1. HYGIENIC PERFORMANCE OF CERAMIC TILES

The manufacturing process for ceramic tiles includes firing at high temperature (around 1100°C-1200°C), and even higher temperatures in the case of porcelain tiles. This temperature causes chemical reactions between the different components in the tile body and the glaze, as well as physical transformations whose main results are the creation of a hard, compact and highly resistant structure, and the reaction and immobilisation of heavy metals, by forming compounds characterised by their high level of chemical inactivity.

As a result, it is impossible for any microorganisms to be present, as the high temperatures used during the manufacturing process make it impossible for them to survive.

If ceramic wall and floor tiles are correctly laid using suitable bonding and grouting materials for their type of use, they are the most effective, comfortable and safe alternative for maintaining correct levels of hygiene and cleanliness.

Their impermeable surface prevents the absorption of any type of liquids, vapours, toxic substances or any other type of contaminant, as well as the production of reactions, putrefaction, efflorescence or organic cultures, due to their non-porous features.

Also, their chemical resistance means they are capable of withstanding aggressive detergents and disinfectants without any alteration, which could not be used with other types of wall and floor coverings. The fact that they cannot become electrostatically charged means that they contribute towards physiological comfort and do not attract electrically charged dust in the atmosphere.

Ceramic tile surfaces are resistant to any type of adherence, and any substance that does become adhered due to the presence of materials such as grease or mud can be easily removed. This also applies to the hygienic properties of ceramic tiles in response to the deposition, accumulation and development of microorganisms and pathogenic or allergic substances.

## 2. PRECAUTIONS WHEN LAYING TILES:

a) Remnants of grouting material should be removed using a sponge dampened with clean water. The material should be removed as soon as possible, as if it is in contact with the glazed surface for a prolonged period it will be difficult to remove, especially on tiles with a relief patterned surface.

b) When laying floor tiles, it is essential to protect the tiles that have already been laid using a suitable method, to prevent damage caused by abrasive material and dragging tools across the surface. Apart from protecting the surface of the tiles, this will make any subsequent cleaning processes easier.

c) Do not use cleaning agents that contain hydrofluoric acid or solid detergents that contain particles that may scratch the material. Hydrofluoric acid will completely remove the glazed surface of the material, causing irreparable damage.

## 3. MAINTENANCE TIPS

Glazed porous as well as unglazed non-porous floor

and wall tiles do not need any type of maintenance once they have been laid. From all of the different types of materials and products used as wall and floor coverings, ceramic tiles have the least maintenance requirements.

Regardless of the type of glaze, intrinsic features such as resistance to surface abrasion or scratching are directly associated with the abrasive agent between the tiles and the sole of the footwear moving over them. To avoid premature wear, floors must be kept clean, placing mats at the entrance to premises with direct access from the street or gardens.

For ordinary cleaning, a damp mop or sponge is recommended. The cleaning water must be renewed frequently so that the previously removed dirt is not deposited on the surface again. It is advisable to use neutral cleaning products.

Glazed wall and floor tiles only require normal cleaning with a mop or damp sponge to return them to their original appearance, plus neutral cleaning product.

Cleaning agents containing waxes should not be used, as they will eventually form a film over the tile that will make them susceptible to absorbing and retaining foreign substances, causing stains that are highly visible and more difficult to eliminate using ordinary cleaning methods.

In bathrooms, where remnants of soap or lime scale can accumulate, tiles should be cleaned regularly with a suitable detergent product, leaving it to act for a few minutes before rinsing.

## REMOVING DIFFICULT STAINS AND INCRUSTATIONS.

To remove difficult stains, for example on surfaces that have not been cleaned for some time, powdered or liquid detergents should be used, rubbing with a sponge or scourer. Special attention should be paid to the tile joints, as they must be restored if they are no longer intact or waterproof, using appropriate sealants. Metallic blades or spatulas should not be used on glazed tile surface, or concentrated products when you do not know the chemical resistance rating of the wall or floor tiles.

Accidents can cause ceramic wall or floor tiles to become stained with different types of substances. Stains and incrustations can be removed using physical and chemical methods, using the most suitable method for the type of tile and the type of stain.

The physical methods involve using detergents or very fine abrasives, which physically remove the stain from the tile surface.

The chemical methods are based on a chemical reaction between the stain or incrustation and the detergent that dissolves it or discolours it.

Only use concentrated acids on glazed tiles if their composition is known, as certain types may affect the tile surface. The following table shows some examples of suitable products for treating specific stains.

|                                              |                                                                                                                                     |
|----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| Cementitious adhesive                        | Acid detergent                                                                                                                      |
| Coffee, tea, food, fruit, juice or cosmetics | Normal detergent dissolved in hot water                                                                                             |
| Greases                                      | Baking soda and water, neutral soap (use a mild scouring pad)                                                                       |
| Pencil stains                                | Soft eraser                                                                                                                         |
| Organic stains                               | Alkaline detergent                                                                                                                  |
| Marker paint                                 | Solvent (turpentine, acetone, ethanol)                                                                                              |
| Rubber remnants                              | Alkaline detergent, solvent                                                                                                         |
| Gasket remnants                              | Acid detergent                                                                                                                      |
| Silicone remnants                            | Hydrogen peroxide or diluted bleach solution (on smooth surfaces not susceptible to scratching, a vitroceramic scraper can be used) |
| Blood                                        | Hydrogen peroxide or diluted bleach solution                                                                                        |
| Inks                                         | Diluted bleach solution                                                                                                             |
| Iodine or bromine                            | Acid detergent, hydrogen peroxide, diluted bleach solution, ammonia                                                                 |

Removing difficult stains and incrustations. To remove difficult stains, for example on surfaces that have not been cleaned for some time, powdered or liquid detergents should be used, rubbing with a sponge or scourer. Special attention should be paid to the tile joints, as they must be restored if they are no longer intact or waterproof, using appropriate sealants. Metallic blades or spatulas should not be used on glazed tile surface, or concentrated products when you do not know the chemical resistance rating of the wall or floor tiles.

Accidents can cause ceramic wall or floor tiles to become stained with different types of substances. Stains and incrustations can be removed using physical and chemical methods, using the most suitable method for the type of tile and the type of stain.

The physical methods involve using detergents or very fine abrasives, which physically remove the stain from the tile surface.

The chemical methods are based on a chemical reaction between the stain or incrustation and the detergent that dissolves it or discolours it.

Only use concentrated acids on glazed tiles if their composition is known, as certain types may affect the tile surface. The following table shows some examples of suitable products for treating specific stains. If the type of stain is unknown, different detergents should be tested, rinsing the surface with water and drying it after each test. In other cases, it may be effective to repeat the treatment several times or use hot water to help with the reaction.

In any event, if you have any doubts whatsoever, consult the technical data sheet for the product.

Also, when carrying out any unconventional cleaning method, first test a small zone before applying the treatment to the whole surface, checking the reaction.

MAINTENANCE INSTRUCTIONS

NON-SLIP MATERIALS

1. INITIAL CONSIDERATIONS

Non-slip materials, due to their inherent surface characteristics (more specific surface,) are less hygienic (it is easier for dirt to accumulate and it is harder to remove it) than models that do not have this property. The recommendation for of this type of texture shall be directed only towards those settings that really require it, either due to legal or regulation specifications, or the establishment of safety conditions necessary to minimize the risk of falls from slipping in specific areas (swimming pools, ,outdoor ramps, wet areas,...)

2. DURING INSTALLATION

In order to minimize deposition of bonding and grouting material debris on the ceramic flooring, we shall take a series of precautions that will facilitate subsequent cleaning and will prevent the use of more aggressive cleaning methods: Adopt the necessary construction and organizational measures to ensure that access and circulation routes remain as dry as possible, avoiding potential water logging (slopes, appropriate outlet openings, drains,... ) Avoid the hardening of the bonding and grouting material on the non-slip surface, eliminating any adhesive remaining while it has not yet set, using plenty of water to this end. The grouting operation shall be limited to small areas, cleaning the material immediately from the ceramic surface. Plenty of clean water shall be used, ensuring that the cleaning debris is eliminated from the ceramic surface, thus avoiding the detached material from depositing again on the tiles. The roughness of the texture, as well as a greater specific surface, are characteristics that cause that, once the cement material's setting time has passed, its surface removal operation is more complex. Protect the flooring until the completion of the work, in order to avoid damage and stains caused by actions subsequent to the flooring installation and prior to the delivery of the work.

3. PROHIBITIONS / ADVISED-AGAINST ACTIONS

No aggressive cleaning products or methods shall be used, specially cleaning with rotary machine with hard PAD discs, as they generate a polished surface and gradually reduce the slip resistance. Metal spatulas, abrasive scourers, or concentrated chemicals shall not be used in cleaning.

4. MAINTENANCE AND REGULAR CLEANING

We recommend installing dirt retention systems in the entries, such as rugs or doormats, as a preventive measure in order to reduce the frequency of cleaning operations. There are several systems that are suitable for cleaning this type of surface: Water pressure equipment or systems. Steam application systems Plastic bristle brush and rinsing with plenty of water Rotary machine is allowed as long as the cleaning tool is a plastic brush. Any commercial disinfectant such as bleach can be used as a cleaning product. Soapy products or those containing waxes in their composition shall be avoided, as they can increase the risk of accidents.

5. CONCLUSIONS

The characteristics of tiles with non-slip texture conform to the use specified in the product's datasheet provided that the appropriate handling, installation, maintenance (cleaning) and use guidelines have been followed. If the owner fails to comply with the provisions of this manual, PORCELANOSA shall not be liable for the incidents that may arise from this non-compliance.

# SPANISH BUILDING CODE

“Safety of Use” Basic Document 1 (“DB SU 1 – Preventing Falls”) of the Spanish Building Code (the CTE in Spanish) defines the requirements that a floor covering must meet in buildings or areas used for health-related, educational, commercial, administrative or public purposes or for parking (excluding areas of restricted use). To comply, the flooring must achieve a minimum slip resistance (Rd) value.

The slip resistance (Rd) value is determined using the pendulum test described in Appendix A of standard UNE 41901: 2017 EX - UNE 41902: 2017 EX.

The following table shows the rating system for flooring, depending on its slip resistance:

|                    |       |  |  |  |  |  |
|--------------------|-------|-----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| SLIP RESISTANCE RD | CLASS |                                                                                   |                                                                                   |                                                                                   |                                                                                   |                                                                                     |

- (1) Except for accesses that lead directly to areas of restricted us .  
(2) In places where users are expected to go barefoot and in the bottom of swimming pools in areas with a depth of less than 1.50 m.

This rating is maintained throughout the useful life of the flooring.

SLIP RESISTANCE, DYNAMIC COEFFICIENT OF FRICTION

IN THE AMERICAN MARKET, THE ASSESSMENT OF THE ANTI-SLIP PERFORMANCE IS CARRIED OUT THROUGH A MOBILE ROBOT (BOT 3000). THIS UNIT TRAVELS ON THE SURFACE BEING TESTED (WETTED PREVIOUSLY) AND DETERMINES ITS RESISTANCE IN RESPONSE TO THE UNIT'S MOVEMENT. THE EEUU STANDARDS (ANSI STANDARD) REQUIERE A DCOF VALUE ≥ 0.42 FOR SURFACES WHICH ARE SUSCEPTIBLE OF GETTING WET.

## IMPORTANT

THE NON-SLIP (ANTISLIP) OR CLASS 3 FINISH IS ACHIEVED USING 2 POSSIBLE TECHNOLOGIES

|                                                                                     |                                                                                                                                                                                                                          |
|-------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <br>NANO-KER: A smoother, easier-to-clean finish. Recommended use: single-family homes, except swimming pools.                        |
|  | <br>HIGH-PERFORMANCE POWDERED GLAZE: A rougher finish. Recommended use: swimming pools, urban paving, and outdoor public paved areas. |

# SLIP RESISTANCE ACCORDING TO STANDARD DIN 51130

Many European flooring manufacturers use tests like the ramp test to rate their products according to their slip resistance. These tests are generally conducted using the German standard, DIN 51130. With this method, a person walks backwards and forwards on an impregnated ramp-type floor used as a test bench. The angle of the ramp is gradually increased until the person slips. The average angle at which the person slips is used to calculate the CoF (coefficient of friction). DIN 51130 uses approved safety boots according to standard EN 345 and engine oil to impregnate the test surface.

RAMP METHOD (DIN 51130)

| TOTAL MEAN VALUE OF SLIP ANGLE | RATING |  |
|--------------------------------|--------|-------------------------------------------------------------------------------------|
| 6° <= Angle <= 10°             | R9     |  |
| 10° < Angle <= 19°             | R10    |                                                                                     |
| 19° < Angle <= 27°             | R11    |                                                                                     |
| 27° < Angle <= 35°             | R12    |                                                                                     |
| 35° <= Angle                   | R13    |                                                                                     |
